W. Pilling

W. Pilling

In 1873 blacksmith Ludwig Lüling and pub owner Wilhelm Pilling founded W. Pilling & Co. The metalworking craft enterprise started its successful story by supplying the local wire industry with annealing pots, water wheels and similar products.

In more than 135 years the smith's shop developed into a world-wide operating industrial enterprise employing today more than 120 people, being able to supply our worldwide customers with Pilling products.

In 2000 a new production site W. Pilling Riepe & Co. KG was built in the north of Germany. This was required for developing new markets and due to the lack of space in the existing plant in Altena.

You can find PILLING products in more than a hundred countries in the world. The worldwide sales are coordinated from the Altena office.

Hot-Dip Galvanizing

Hot-Dip Galvanizing

In our Riepe plant we make Pilling kettles and other special weld constructions for the galvanizing industry. With our experience of more than hundred years and continuous improvement of both, materials and production technologies, we are in a position to produce galvanizing kettles in all dimensions and shapes for all kinds of heating systems.

Upon request we can coordinate the necessary kettle design details with your furnace supplier. We also assist you in selecting most favourable and punctual transport and if desired we can provide our renowned Pilling Service.
